Those varieties we do not produce ourselves are grown for us by the best American and foreign specialists—experts in the growing of certain kinds of vegetables and flowers. GARDEN and FARM BEETS

One ounce of seed will sow 50 feet of drill; 5 to 6 pounds per acre

The best results are obtained on a deep, rich, sandy loam. Sow seed 1 inch deep, in drills 16 inches apart, as early as possible. If wanted very early, sow Detroit Dark Red and Crosby's Egyptian in hotbeds and transplant to open ground. Thin to stand 3 or 4 inches apart. Cultivate cleanly and thoroughly. For succession, sow at intervals until middle of July.

Prices, Garden Beets, pkt. 10c, oz. 20c, ¼ lb. 50c, lb. \$1.75 postpaid

CROSBY'S EGYPTIAN, H. & V. Select Strain. Our special strain of this popular variety is better in many respects than the old one. Globular in shape, perfectly smooth, has a short top, small tap-root, and both skin and flesh are dark in color. Much earlier than all other dark-fleshed varieties. The very best early Beet for home- or market- garden.

ROCHESTER, or CRIMSON GLOBE. A fancy home-garden Beet, small in size, handsome dark red in color, smooth and uniformly round in shape. Flesh red, tender, and high quality.

EARLY WONDER. For those who want the very earliest Beet, this variety should be planted. The tops are medium short and the Beet is round with skin and flesh lighter color than Detroit.

Detroit Dark Red Beet

The most popular and best canning Beet grown. As a second-early variety, we recommend it for the home- and market-garden. Our special strain is more uniform in shape and color than the old Detroit Dark Red. The tops and tap-roots are small and the leaves dark green, shaded red. The Beets are round, smooth, and very dark red in skin and flesh. In tenderness and sweetness they are unsurpassed. Fine for canning. **Be sure and plant some H. & V. Selected Strain of Detroit Dark Red Beets.** (See cut.)

Desirable for stock-feeding not only being a very large cropper and much easier to harvest than other varieties, but also having higher nutritive value, being especially rich in sugar. This long, ovoid Mangel, growing partly out of the ground, can be harvested and stored more cheaply than any other root-crop.

WANZLEBEN. Large, heavy roots, containing a high percentage of sugar; a heavy yielder and easy to dig.

MANGEL-WURZEL

Oz. 10c, ¼ lb. 25c, lb. 85c, postpaid

GOLDEN GIANT. LONG RED. GOLDEN TANKARD.

SWISS CHARD or SPINACH BEET

One ounce will sow about 75 feet of row

GIANT LUCULLUS. (See cut.) A vegetable of many fine qualities not well known in the home-garden, but which should be more widely planted. Grown exclusively for the numerous, fleshy, tender leaves and leaf stalks, which, for use as greens are superior to those of other Beets. Later in the season the wax-like leaf-stems are cooked like asparagus or are pickled. Seed planted early in the spring will produce plants from which cuttings may be made all summer, as you can cut right down to the ground, and new shoots will spring up and make a fast growth. Every garden should have a few rows of this desirable vegetable. Pkt. 10c, oz. 20c, ¼ lb. 50c, lb. \$1.50.

LARGE-RIBBED SILVER BRAZILIAN. Light colored leaves in great abundance. Mild flavor. Pkt. 10c, oz. 15c, ¼ lb. 40c, lb. \$1.25.

GIANT SOUTHERN CURLED. A favorite in the South where it is grown for spring salads. Pkt. 10c, oz. 15c, ¼ lb. 50c.

Giant Lucullus Swiss Chard

CABBAGE

Sow 1 ounce for 3,000 plants; 4 ounces for an acre

The seed we offer is absolutely new stock from the best professional growers. A heavy, moist, rich loam, thoroughly cultivated, highly manured and worked deep is most suitable to Cabbage. Early Cabbage should be started under glass in March, and transplanted 24 inches apart in rows 2 feet apart as soon as ground outside can be prepared.

For late plants, sow in drills in open ground in May; transplant in July. Protect against insects by dusting.

Early Varieties

EARLY JERSEY WAKEFIELD. This fine variety is the earliest and surest heading of first-early Cabbage for home- and market-garden. A hardy, compact, erect grower, with few outer leaves, which permits close planting, short stem; medium-sized, solid, pointed, uniform heads of fine quality. Pkt. 10c, $\frac{1}{2}$ oz. 25c, oz. 45c, $\frac{1}{4}$ lb. \$1.35.

Chinese or "Celery" Cabbage

Red Varieties

CARROTS

One ounce will sow 100 feet of drill; about 3 pounds for an acre

Any good land, thoroughly worked, will produce a satisfactory crop of Carrots. Sow as early in spring as possible, though good crops may be grown from seed sown as late as the middle of June. For table use, sow smaller kinds early, in rows 16 inches apart; for field-growing, in drills, 18 to 24 inches apart. Cover $\frac{1}{2}$ to 1 inch deep and press soil down firmly above seed. Thin 2 to 6 inches apart, according to size of variety. We pride ourselves on the quality of our Carrot seed. No better strain is to be had in our Chantenay Stump-rooted, Danvers Half-long, and our Half-long Nantes Scarlet.

EARLY FRENCH FORCING. For those who want a very early fancy, tender, round, sweet Carrot for forcing or for early growing outside, Early French Forcing cannot be equaled. Pkt. 10c, oz. 20c, $\frac{1}{4}$ lb. 60c, lb. \$1.75.

CAULIFLOWER

For early Cauliflower, sow seed under glass in January or February and transplant to coldframes, 2 or 3 inches apart each way. Set in open ground early in the spring in rich, warm, moist loam. Water freely in dry weather, especially when plants are heading. For main crop, sow seed in June; set out young plants the latter part of July. After heads have begun to form, draw leaves over and tie to protect from the sun and to keep them white. Cut while heads are compact and firm. Protect from insects by dusting or spraying with tobacco dust or kerosene emulsion.

Our Cauliflower seed is grown especially for us in Denmark, where the best seed is produced. One ounce of seed will produce about 2,000 plants if sown in the open ground, 3,000 plants if sown in frames.

EARLY SNOWBALL. An extremely early, dwarf variety, most desirable for the home-garden. Admirably adapted for forcing or wintering over for early crop; also one of the best for late summer or fall crop. Heads medium to large, solid, compact, round, and very white. CELERY

One ounce of celery seed will produce about 7,000 plants

Celery seed is very slow in germinating and should be sown in March in flats under glass and kept moist. When plants are 2 inches high, thin out and transplant to stand 3 inches apart each way. When 5 inches high, set out, 6 inches apart, in trenches 6 inches deep. Cut off outer leaves and press soil firmly about roots. Cultivate thoroughly. When full grown, blanch by mounding gradually with earth or by pressing stems together by boards on both sides of row. For winter storage, take up the plants with roots and place upright on wet soil in a dark cellar or root-house, packing closely.

Cultivate thoroughly until runners make this impossible. If plants are attacked by beetles, spray with Pyrox or arsenate of lead. Always wash fruits thoroughly before eating when these sprays are used. If foliage is attacked underneath, spray with Black-Leaf 40.

Solid, crisp and tender Deltus Cucumbers

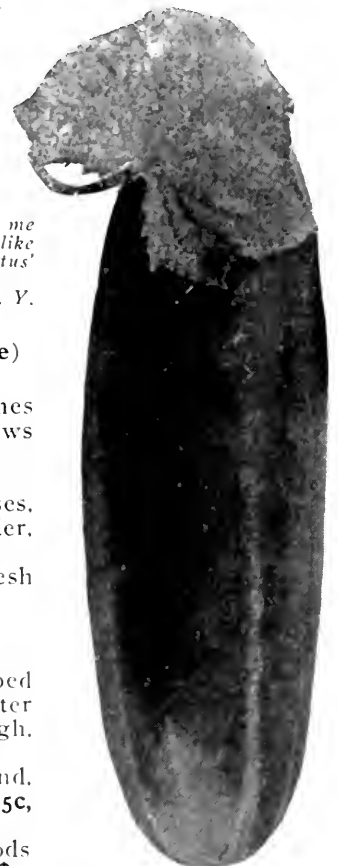

Deltus Cucumbers

For twenty years Mr. Adelbert Titus, one of the most progressive and successful vegetable growers in Irondequoit, N. Y., a district famous throughout the country for its fine vegetable products, has been perfecting this wonderful cucumber. Mr. Titus works 30 greenhouses and is a leader in the growing of Cucumbers, radish, lettuce, and tomatoes. In Deltus, Mr. Titus has produced the ideal cucumber. The vines are strong, healthy, and productive. The fruit is early, and very long, with a uniform diameter its entire length. The ends are blunt, cutting down the waste when slicing to a minimum. Skin is smooth and of a rich dark green color. Flesh is solid, crisp, tender and, with few seeds. The best variety for forcing or the garden. We are indeed fortunate in being able to offer Deltus to our friends and customers among the market- and home-gardeners. Our seed comes to us direct from the originator. It is selected from the most perfect that Mr. Titus grows. Pkt. 15c, ½ oz. 85c, ¼ oz. \$1.50, ½ oz. \$2.75, oz. \$5.00.

Extract from a letter received
September 7, 1920:

"The Deltus cucumber is a wonder, very dark, smooth, uniform in size, extra long, full at both ends and in fact the best type of cucumber I have found. I might add that while I have been very well satisfied with the ———, it does not compare with the 'Deltus' in any respect."

"How many pounds can you let me have and at what price? I would like to plant my entire acreage to 'Deltus' next season."

H. & V. Superb Asters

Through the activity and foresightedness of Mr. Charles H. Vick, the strain of Asters known as "Vick's Branching" became well known to the floral world. The original Vick's Branching was introduced about 25 years ago, and at once sprang to the greatest popularity. Since that time many strains have been developed, but none that are better than the original. All of the seed which we offer, whether in the Branching class or in other classes, has been grown under our personal direction; it is absolutely fresh 1920 stock, free from stem-rot and other diseases so prevalent, strictly true to name and of the very highest quality.

VICK'S BRANCHING ASTERS

This superb class of Asters still holds its popularity despite the introduction of many later novelties. The blooms are borne on long stems, making them extremely valuable for cutting. The plants frequently cover a space of 3 feet, and should be allowed ample room to develop to full size. Seed sown in pots or boxes in March or April and transplanted to outdoor bed in May or June will provide bloom in August and September.
